

Roka-Q

Roka-Q with transverse groove is mounted on the horizontal reinforcing steel. The two spring steel clamps \varnothing 2 mm are placed over the vertical reinforcing steel and clamp the Roka optimally to the reinforcing steel. Quick installation is guaranteed. The bevel is used to guide the reinforcement cage into the formwork. This prevents the formwork from catching on the spacer. The groove width and depth are produced as required.

Article description	Title of variant	Length mm	Concrete cover mm	Weight kg/100 pieces	Packaging piece/gibo
