

MTW 2004 assembly trolley

Mobile work platform for sighting and renovation work, assembly/disassembly of cornice consoles or laying of pipelines in bridge edge areas.

Permissible load:
150 kg per m² or 4 people

Complex device, apart from ballast elements (steel plates) and access components, no other individual components
For assembly and disassembly as well as for moving the MTW's 2004, the boom, mast and working platform are positioned accordingly using crank operation

Protected access within the structure

Traction:

- manually by site personnel
- Motorized vehicles
- Grab pull (manual)

Faster assembly and disassembly due to the prefabricated construction tailored to the situation

Height-adjustable chassis (10 cm grid), adaptable depending on the height and inclination of the structure

Wheel sets can be steered and braked individually

Own weight:

Assembly trolley approx. 64.53 kN (6.4 t) including ballast
