

Monomax injection system

The tightness of concrete structures is becoming increasingly important. Construction joints in components are structurally and technically unavoidable. But not the moisture damage that occurs again and again in these areas. Necessary renovations are complex and cause high costs. The rapidly growing awareness of quality and durability calls for new, constructive solutions that guarantee a long-term sealing reserve.

Commitment

Sealing and non-positive connection of construction joints

Injection hose MONOMAX for injection of:
 PUR resin (corresponds to P-Pur in the ABP)
 microcement (extremely fine cement)
 PUR foam
 epoxy resin

Can be pressed several times, e.g. B. with finest cement. A prerequisite is the intensive rinsing of the transport channel after each compression.

Characteristics

Very flexible, therefore easy to lay
 Secure against the ingress of foreign substances

Construction

Foamed plastic injection hose
 Outlet openings in the form of micro-slots evenly distributed over the circumference

Connection

duo box; for connecting two hoses; Standard depth for concrete cover 30 mm, other depths on request
 Hose end box (for ready-made hose with Quicky and fabric-reinforced PVC hose)

Hose attachment

Plastic holder plug
 Hose clamps MONOMAX with head bolts/knobs

Monomax injection system

Article description	Title of variant	Packaging piece/ metre/ metre by the metre/ bucket/ bag/ bundle/ box/ can	Weight kg/metre	Weight kg/piece	Weight kg/100 pieces
86100040	Injection system MONOMAX, unassembled	100 metres/roll	0,105		
86100043	Injection system MONOMAX ECO-Line, unassembled	100 metres/roll	0,105
